A privately held industrial and commercial group.

Boran & Co. s.r.o. is a privately held industrial and commercial group, headquartered in Bratislava. The Group invests in, operates, and represents businesses across a defined set of strategic sectors — heavy industry, energy, chemicals and petrochemicals, pharmaceuticals, technology, food and beverage, and international trade.

The Group is built around three roles, held in equal balance. As principal investor, it commits its own capital to industrial and commercial projects of consequence. As active operator, it holds and runs a portfolio of four specialised subsidiaries. As authorized partner and representative, it acts as the named regional counterparty for international companies entering Central Europe.

Its position rests on two capabilities held simultaneously: serving as a credible local counterparty inside Central Europe, and maintaining the international relationships required to bring large-scale projects, products, and capital into the region.

Boran & Co. is present only in businesses of strategic consequence — sectors where committed capital and active operation produce real, durable change. The Group does not pursue diversification for its own sake.

One commercial centre. Four specialised companies. A single accountable counterparty.

SECTORS OF PRESENCE

- 01 Heavy Industry & Manufacturing
- 02 Energy — Traditional & Renewable
- 03 Chemicals & Petrochemicals
- 04 Pharmaceuticals & Life Sciences
- 05 Food & Beverage
- 06 Artificial Intelligence & Technology
- 07 Drone Technology — Civil Applications
- 08 International Trade & Distribution

How to engage the Group.

Boran & Co. is built around three roles of equal standing — not one at the expense of the others. Each is a distinct way of working with us.

O1

WE INVEST

Principal capital, committed to industrial and commercial projects of strategic consequence. We are principal investors — not advisors, and not passive financial investors.

ENGAGE US AS

Co-investor · Project principal · Long-term shareholder

O2

WE OPERATE

A portfolio of operating companies, run — not merely owned — by the Group across priority sectors. Each subsidiary carries a defined sector mandate and its own operating team.

ENGAGE US AS

Operating counterparty · Sector partner · Execution capacity on the ground

O3

WE REPRESENT

Authorized partner, joint-venture counterparty, and representative for international principals in Central Europe — local presence, regulatory familiarity, and the commercial relationships a market entry requires.

THREE FORMS OF ENGAGEMENT

Official Partnership · Joint Venture · Authorized Distribution

International principals engage through Boran & Co. s.r.o. as the single accountable counterparty — regardless of which operating company is most relevant to their sector.

HOW ENGAGEMENT BEGINS

O1

First conversation

Your project, your market, and whether the fit is real.

O2

A concrete proposal

Which companies carry the mandate — structure, scope, terms.

O3

A named counterparty

One accountable entity under Slovak and EU law: Boran & Co. s.r.o.

Boran & Co. s.r.o.

The parent company and commercial centre of the Group — and the single point of entry for every counterparty.

WHAT WE DO

Boran & Co. s.r.o. acts as the official partner, joint-venture counterparty, and authorized distributor for international companies entering Central Europe. It provides what international principals cannot easily build on their own: a credible local counterparty, established commercial relationships, regulatory familiarity, and the operational capacity a market entry requires.

WHAT WE CAN TAKE ON

- Market entry into Central Europe under a named, accountable regional partner
- Establishment and administration of joint ventures under Slovak and EU law
- Exclusive and authorized distribution across Central European markets
- Structuring and coordination of cross-border trade along the Group's corridors
- Representation of a counterparty's commercial interests before partners and institutions in the region

Five companies, one point of entry: every mandate begins — and remains — with Boran & Co. s.r.o.

Sky Drone Technologies s.r.o.

Complete long-range unmanned aviation programs for civil operators — not equipment, a capability.

WHAT WE DO

Sky Drone Technologies delivers complete long-range unmanned aviation programs built around gasoline-powered fixed-wing aircraft with operational ranges of approximately 1,500 kilometres. Missions cover linear infrastructure — pipelines, power transmission, railways — wildfire response, public safety, and precision agriculture. Every program is delivered whole: concept, payload, ground segment, aviation documentation, operator training, and entry into service.

WHAT WE CAN TAKE ON

- Regional monitoring programs for pipeline, energy, and transport corridors
- Payload configuration — multispectral, SWIR, EO/thermal — matched to detection requirements
- AI-assisted analysis: automated anomaly and change detection across repeated flights
- Ground segment: fixed or mobile control centres, landing strips, LTE/5G connectivity
- Reference concept: a real 480 km national gas corridor — two aircraft, two stations

Begin with your territory — the corridor, the region, the risk. The response is a concrete operating concept: aircraft, sensors, ground segment, economics.

Vanadium s.r.o.

Private, air-gapped AI systems — built on your infrastructure, trained on your knowledge, loyal only to you.

WHAT WE DO

Vanadium builds invitation-only AI systems for organizations whose knowledge cannot leave the building. Systems run on the client's own infrastructure — no cloud, no third parties — and are trained on the client's documents, rules, and philosophy. Current work includes government engagements and enterprise deployments across Central Europe.

WHAT WE CAN TAKE ON

- Air-gapped AI deployments on client-owned infrastructure — full data sovereignty
- Systems trained on the organization's own documents, processes, and rules
- Multi-agent orchestration: planning, retrieval, drafting, validation, and memory in one system
- Built for settings where confidentiality is structural: government, legal, industrial, financial

Work is by invitation: systems aligned with your philosophy — and loyal only to you.

AGENT ROLES IN ONE SYSTEM

Europa Pharmaceutical s.r.o.

EU-GMP generic medicines — coordinated from Europe, delivered with full traceability.

WHAT WE DO

Europa Pharmaceutical supplies high-quality generic medicines produced to EU-GMP standards, coordinating the full chain from API sourcing and manufacturing to quality control, export, and distribution. The portfolio spans pain relief, antibiotics, and chronic-care therapies in tablet, injectable, and topical forms.

WHAT WE CAN TAKE ON

- Supply of an EU-GMP generics portfolio to wholesalers, distributors, and institutional buyers
- Regulatory and registration support for market entry
- Export coordination with batch-level traceability and pharmacovigilance
- Development of branded-generic and private portfolios for specific markets

From API sourcing to final delivery — one coordinated chain, traceable at every step.

Craft Products Trade s.r.o.

A commercial bridge between food and beverage markets — from Central Europe, in both directions.

WHAT WE DO

Craft Products Trade imports, exports, and develops food and beverage business between Central Europe and global markets, working with producers and buyers across Europe, Asia, the Middle East, the Caucasus, the CIS, and Africa. The company brings products into wholesale, retail, HoReCa, and institutional channels — with the documentation, compliance, and logistics each market requires.

WHAT WE CAN TAKE ON

- Import of international products into Central Europe; export of European products to global buyers
- Brand representation and market-entry coordination for producers entering the EU
- Private-label development connecting manufacturers with retailers and hospitality groups
- Distribution access: wholesalers, supermarkets, specialty retail, HoReCa, institutional buyers
- Manufacturing partnerships, including minority investment where growth potential is clear

Not only a local trading company — a commercial bridge between markets.

CHANNEL TYPES

EU

COMPLIANCE DISCIPLINE

One counterparty. Combined capability.

Most serious mandates touch more than one company. In every case the counterparty deals with one accountable entity — Boran & Co. s.r.o. — while the relevant operating companies execute. Three examples:

I. A developer of a large coastal destination

Seeking European buyers and long-term operating partners. The Group can represent the development to buyers and partners across Central Europe; supply its hotels, restaurants, and retail through Craft Products Trade; provision its pharmacies and medical services through Europa Pharmaceutical; and build private AI systems for sales and operations through Vanadium — on the developer's own infrastructure.

BORAN & CO. · CRAFT PRODUCTS TRADE · EUROPA PHARMACEUTICAL · VANADIUM

II. A national operator of linear infrastructure

Responsible for hundreds of kilometres of pipeline, transmission, or rail. Sky Drone Technologies delivers the complete monitoring capability — aircraft, sensors, ground segment, training — while Vanadium provides the analytics layer, and Boran & Co. structures the contract under Slovak and EU law.

SKY DRONE TECHNOLOGIES · VANADIUM · BORAN & CO.

III. An international producer entering Europe

With a strong product and no local presence. Boran & Co. acts as the named regional counterparty; Craft Products Trade or Europa Pharmaceutical — depending on the product — carries representation, compliance, and channel access; distribution follows through established wholesale, retail, and institutional relationships.

BORAN & CO. · CRAFT PRODUCTS TRADE / EUROPA PHARMACEUTICAL

If your project resembles one of these, the conversation is short: what you need, which companies carry it, and what the first practical step is.
